

Oral Cavity Examination

Professor Akinyele Olumuyiwa Adisa

Consultant Oral Pathologist

University of Ibadan and University College Hospital

Member – HPV Consortium

Why is oral health important?

- Oral health affects our ability to
 - Eat
 - Speak
 - Express emotions
- Oral health also affects a person's self-esteem, school performance, and attendance at work or school.
- Taking care of your oral health is an investment in your overall health.

Best practices that can keep oral cavity healthy

- Brush regularly (at least twice daily) with fluoride containing toothpaste, but not aggressively
- Floss once a day
- Use non-alcohol based mouth-rinse twice a week
- See a dentist for a check and cleaning, at least once in six months
- Limit sugary foods and drinks
- Do not use tobacco in any form (carcinogenic)
- Avoid use of alcohol (carcinogenic)
- Avoid unprotected oral sex (exposure to high/low risk HPV)

Ground rules for an Oral Examination

Obtain verbal consent

- The procedure should be explained to the person and every effort should be taken to ensure that the subject is relaxed and not anxious

- Be systematic: consistently complete the examination in the same order
- A high level of clinical alertness is required when examining these sites

What tools are used to examine the oral cavity?

- **Good light source**

- Examination of the oral cavity should be carried out with adequate lighting from an external source such as fixed or head-mounted examination lights or hand-held flashlights, supplemented by room lighting

- Gauze. Allows examiner to grasp and manipulate the tongue securely
- Mouth mirror visualizes lingual surfaces of anterior teeth.

- **Gloves**

- **Wooden Spatula**

What are the areas to examine?

- Oral examination commences with the visual examination of the lips (vermillion border and labial mucosa)
- The corners of the lips
- Buccal mucosa
- Floor of the mouth
- Tongue
- Hard and Soft Palate
- Gingivae (gums)
- Retromolar trigone
- *Teeth*

- Lips (vermillion border and labial mucosa) and corner of lips

Buccal mucosa

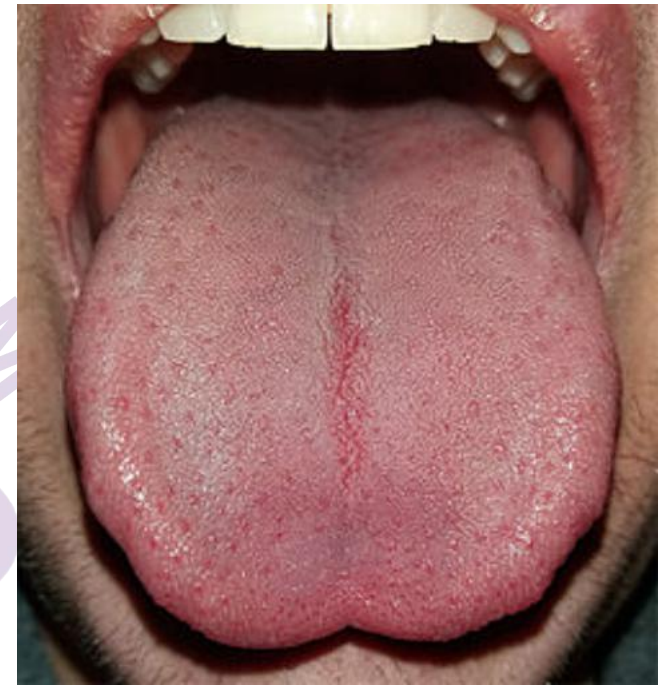

Buccal mucosa with linea alba

Floor of mouth

Tongue

Hard Palate

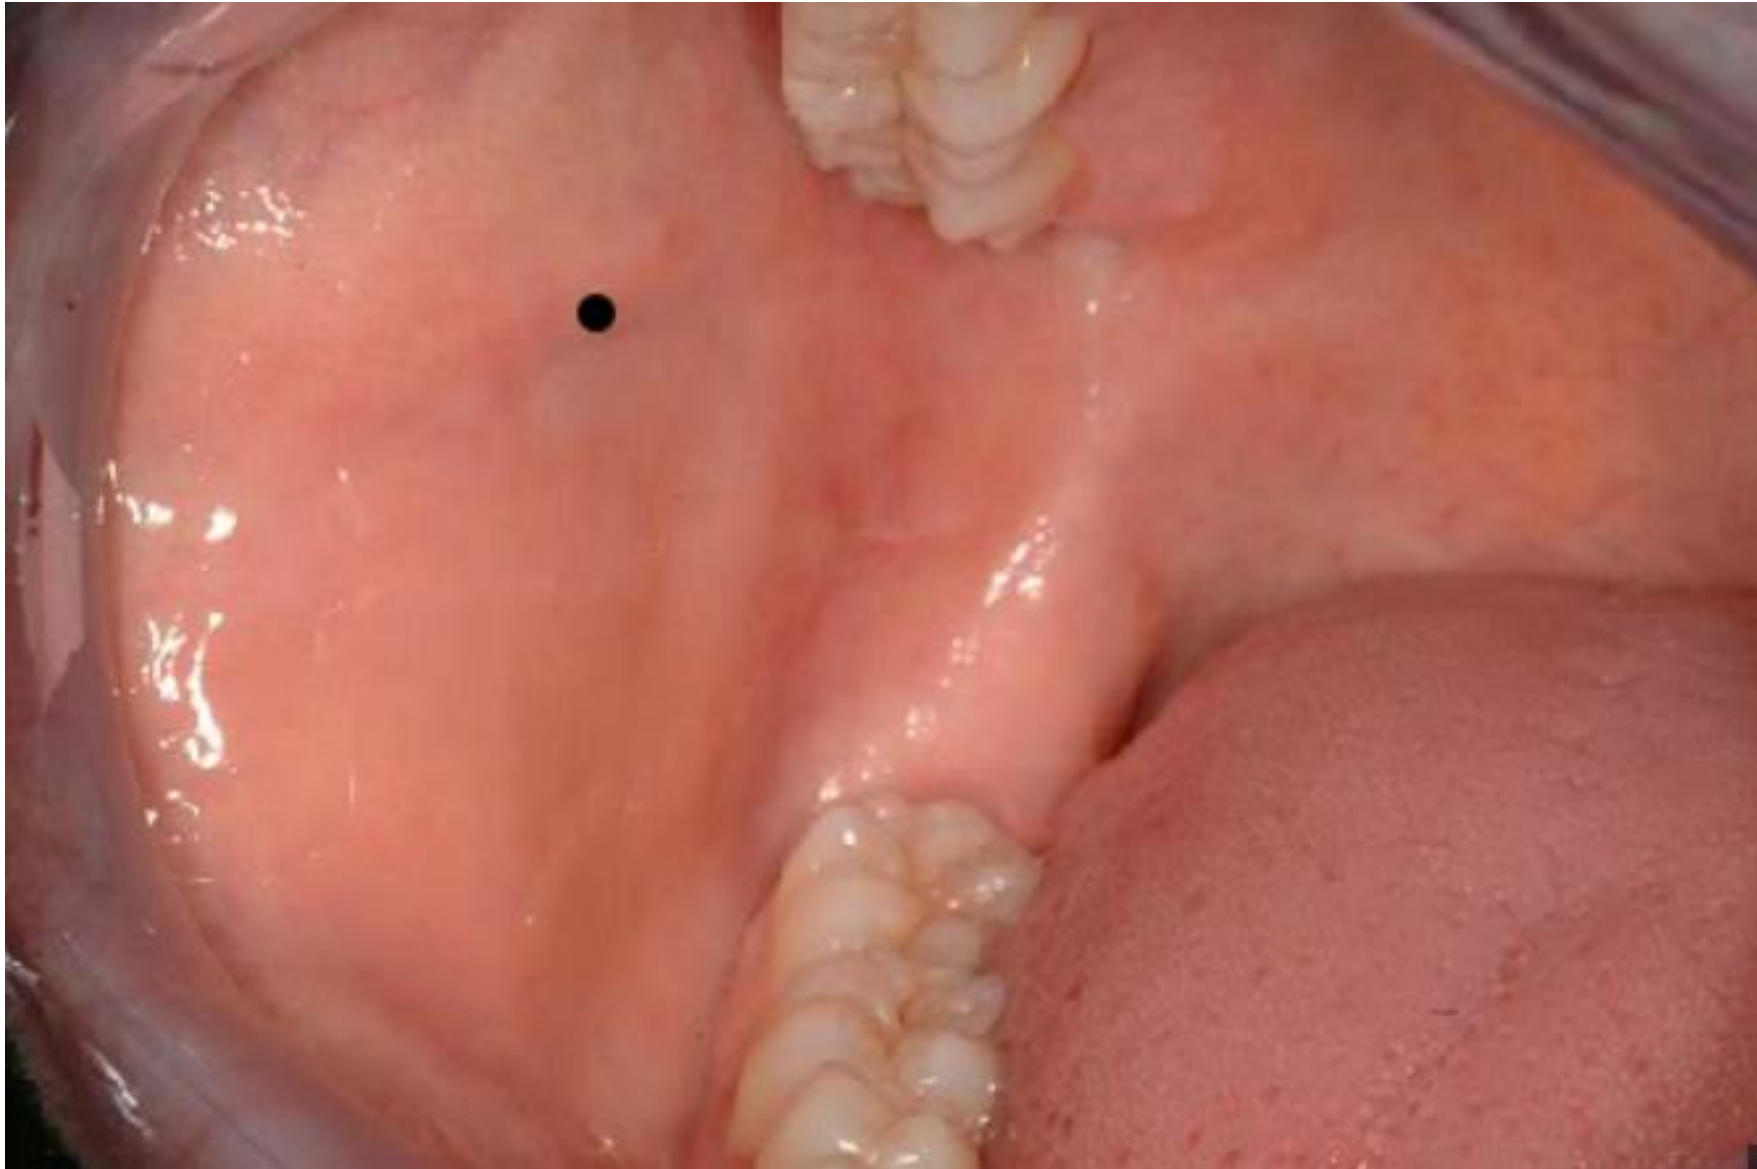

Gingivae or Gums

Soft-Palate

Retro-Molar Trigone

Normal things to note

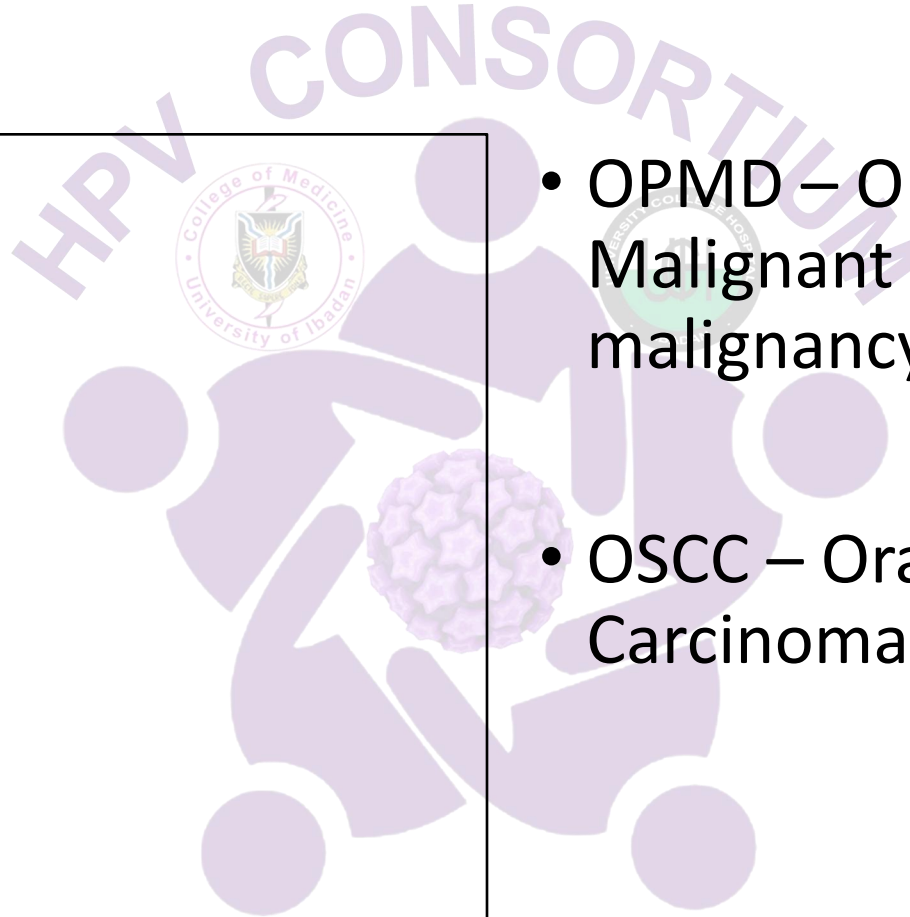

- Oral mucosa is generally pink in colour
- Circumvallate papilla on tongue
- Vessels on ventral tongue
- Linea Alba on buccal mucosa

Abnormalities to note

- Change in color
- Change in texture

- OPMD – Oral Potentially Malignant Disorder (pre-malignancy)
- OSCC – Oral Squamous Cell Carcinoma

Oral Leukoplakia

Proliferative Verrucous Leukoplakia

Erythroplakia and/or Erythroleukoplakia

CONSORTIUM

Oral Submucous Fibrosis

Oral Lichen Planus

Actinic Cheilitis

Palatal Lesion in
Reverse Smokers

Oral Lupus Erythematosus

Dyskeratosis Congenita

Oral Lichenoid Lesion

Oral Graft Vs Host Disease

OSCC

Squamous Papilloma (Warts)
